

INTELLIGENT MUSIC PLAYER

By Najiya Nazrin P N
S3 MCA

TVE20MCA-2042

Project Guide: Prof. Minu R Nath

Introduction

- List of songs that comply with the “emotion” derived from the input provided.
- Web application aimed at scanning and interpreting the data and accordingly playing music.
- Artificial intelligence technologies

Literature Review

- [Emotion Based Music Player](#), Nikhil Zaware, Tejas Rajgure, Amey Bhadang, D. D. Sapkal
- [Facial Expression Based Music Player](#), Prof. Jayshree Jha, Akshay Mangaonkar, Deep Mistry, Nipun Jambaulikar, Prathamesh Kolhatkar
- [Real time emotions recognition and analysis based music player](#), Mahek Gupta, Shreya Singhal, Mohit Pandey, International Journal of Advance Research, Ideas and Innovations in Technology
- [BEHAVIOURAL, EMOTIONAL STATE BASED MUSIC SELECTION & PLAYLIST GENERATING PLAYER](#), Jangid sheetal Kailash, Vaishnika Balmukund Patil, Neha Vinay Patil, Ajahar Ismailkha Pathan
- [Facial Emotion Detection using CNN](#), Rohit Jadhav, Jayesh Bhuke, Nita Patil
- [Facialemotiondetectionbriefreview](#), Illiana Azizan, Fatimah Khalid

Existing system

- Gaana, Saavn and Spotify
- Moodfuse
- Steromood

Proposed system

- The Application is developed by using Streamlit, OpenCV, Convolutional Neural Network.
- FER-2013 dataset
- Emotion is detected and plays the song.

Project Includes

- Facial Emotion Recognition
- Plays the music

Block diagram for data collection

How Facial Emotion Recognition Works

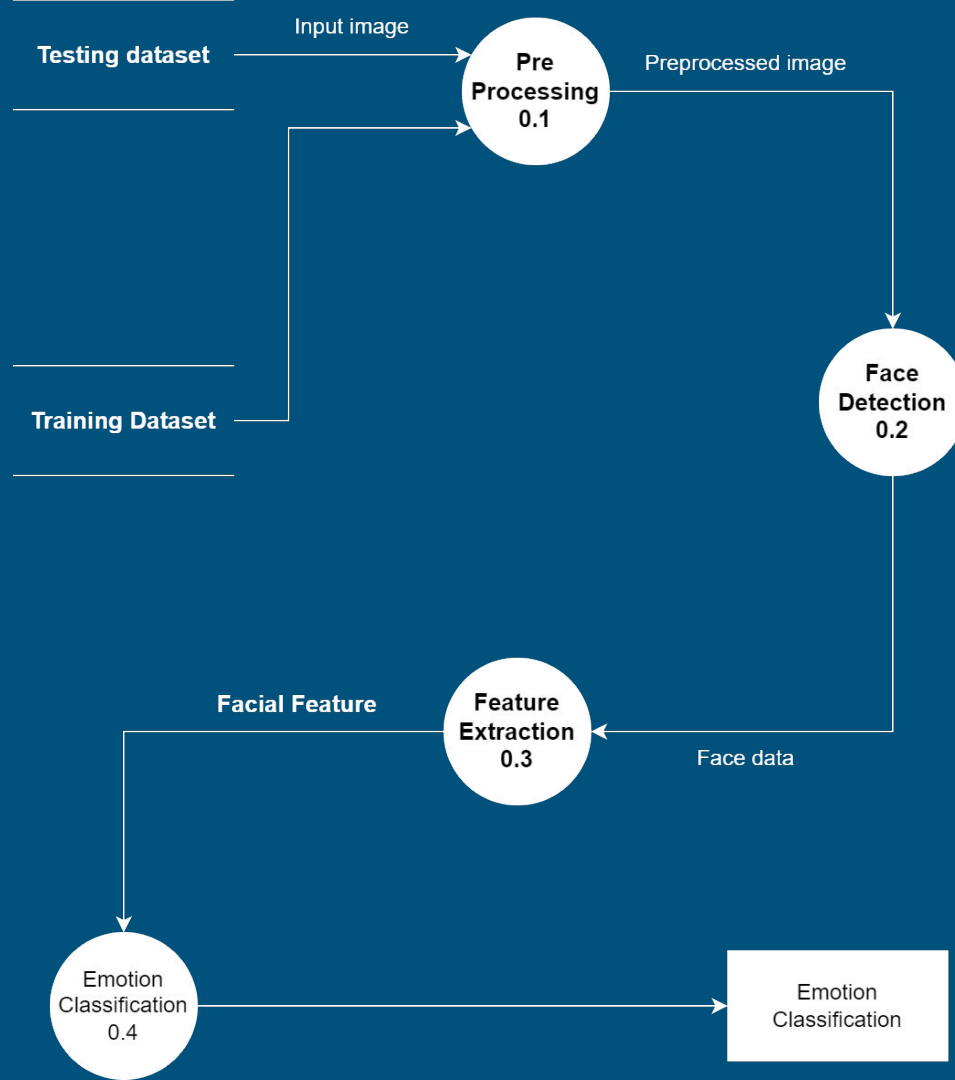

DFD of Emotion Recognition

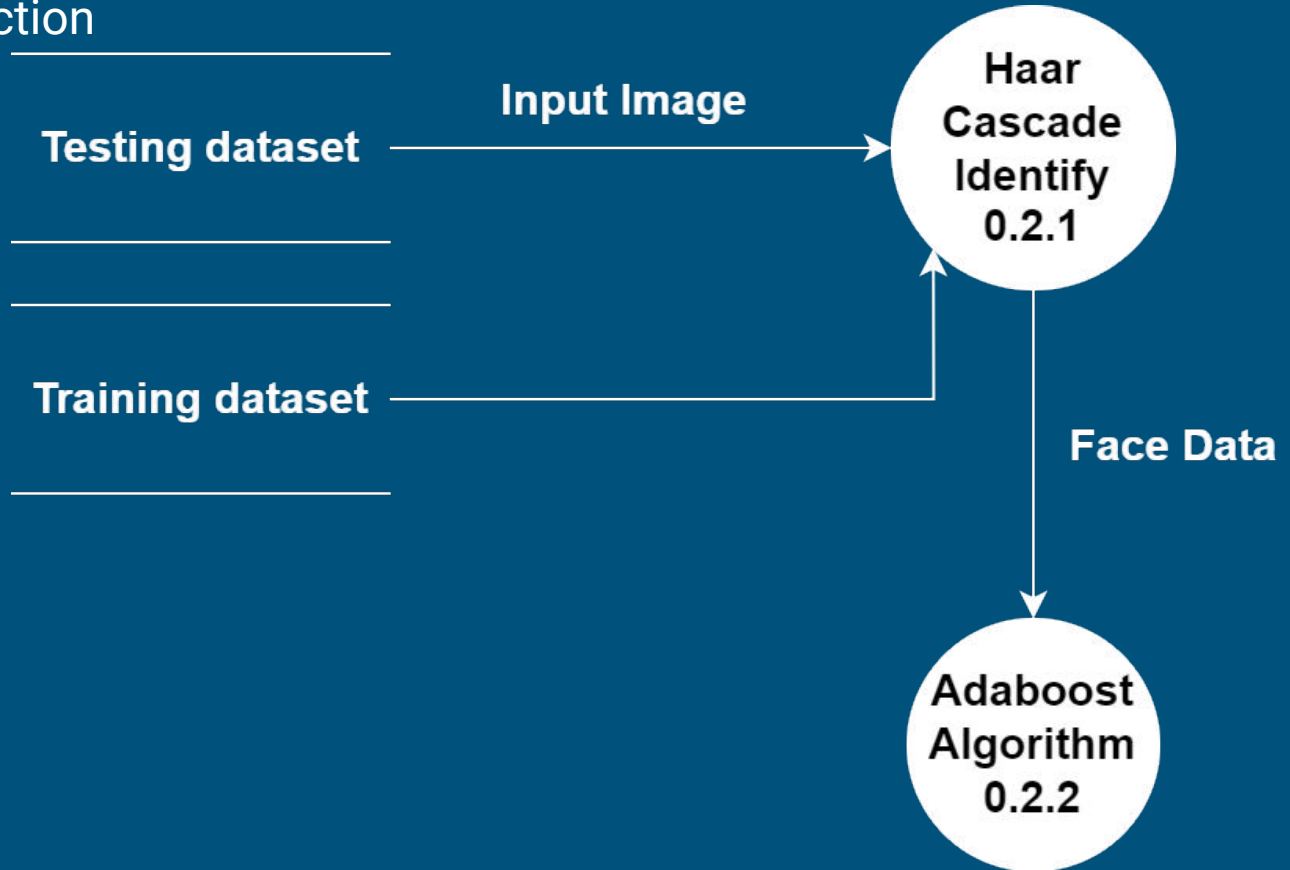

Level 0

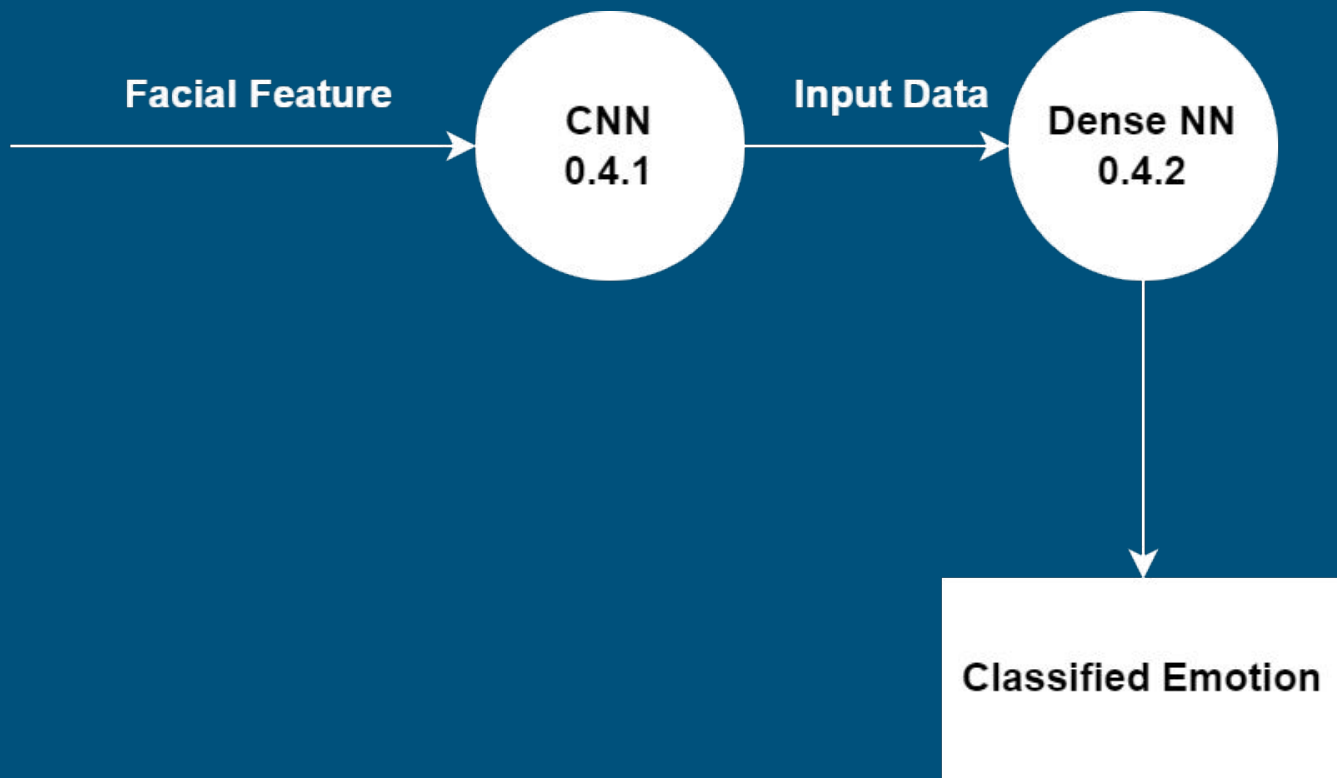

Level 1

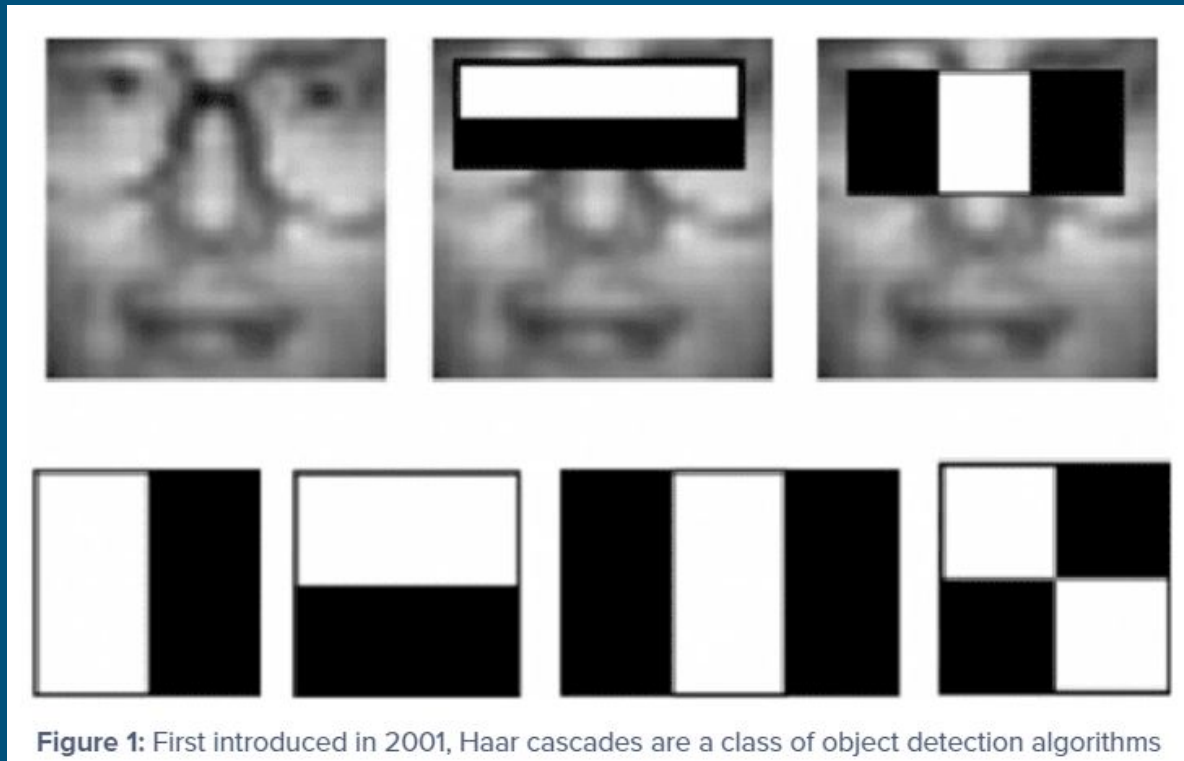

Level 2 - Face Detection

Level 2 - Emotion Classification

HaarCascade

- Sliding a fixed size window across image.
- At each of these phases, window stops, computes some features, and then classifies the region as
 - *Yes, this region does contain a face.*
 - *No, this region does not contain a face.*

- Five rectangular regions
Corresponding difference of sums
- Features classify parts of a face
- **AdaBoost algorithm** to select which ones correspond to facial regions.

Advantages

- Can be used for visually impaired person
- Efficient and effective
- No trouble of troublesome selection of songs.
- Ease of use
- Plays almost all songs as in other applications we may miss some of our favourite songs.

Disadvantages

- Lot of training data is required.
- Need regular monitoring.
- Camera dependent.
- Mixed mood detection is not provided.

Conclusion

- Developed an application for predicting the emotion of the user using Convolution neural networks.
- Plays songs according to the emotion of the user
- Applied it on various images and achieved an accuracy of above 80%.
- Would like to modify to a better version as an android application.
